

Protein and Monoclonal Antibody Production Core

Terms and Conditions

Core facility operations are supported by extra-mural grants and institutional resources enabling substantial subsidization of charge-back rates such that users on average pay much less than the actual cost of services provided.

Acknowledgement of the Core in Publications

Continued core operations by grant and institutional funding are highly dependent on documentation of core support within manuscripts of its users and publications that utilize data or products generated by the core, require citation in the acknowledgment section of the paper. Acknowledgement should include the core name, core personnel and any grants that directly support core operations.

Co-authorship in Publications

In addition to acknowledgement, required for all publications, it is not uncommon for projects to require significant intellectual and experimental input from core personnel that lie outside of standard pay-for-service efforts. In these cases, co-authorship on the resulting manuscript is expected for contributing core staff. Authorship will be determined via discussion between the Principal Investigator and Core Director(s).

Core specific information

Core Name:	Protein and Monoclonal Antibody Production Core
Personnel:	Kurt Christensen (Lab Director); Yingmin Zhu (Core Director); Josephine Ferreon (Core Director); Karen Moberg; Honglei Zhai
Grants:	P30 Cancer Center Support Grant NCI-CA125123

Printed name of Principal Investigator

Signature of Principal Investigator

Date
