

"Platelets' promote liver injury"

Fong Lam, M.D. FAAP
Associate Professor
Department of Pediatrics
Pediatric Critical Care Medicine
Baylor College of Medicine

About this seminar:

Platelets have long been known to promote hemostasis. Recently data have shown their importance in inflammation, as well, particularly in sepsis and acute lung injury. Herein, we will discuss platelets' role in the development of acetaminophen induced liver injury and show their potential role in promoting liver fibrosis.
