November 1, 2023

Working with High-Risk Youth: Child Trauma and Differential Diagnosis

Eugene Griffin, JD, PhD

Retired Faculty

Feinberg School of Medicine

Northwestern University

Objectives: At the conclusion of this session, participants should be able to:

- Analyze multiple definitions of trauma using the Three E Framework.
- Recognize the eight DSM diagnoses that share common symptoms with PTSD.
- Recall federal government trauma concerns when prescribing psychotropic medications for youth in child welfare.
- Understand the constitutional issue at stake in mental health, criminal, child welfare, and juvenile justice courts.

Postpartum Psychosis (PPP) and Infanticide: Clinical and Legal Perspectives in 2023

Nicole Cirino, MD

Professor

Obstetrics & Gynecology

Baylor College of Medicine

Texas Children's Hospital, Pavilion for Women

Objectives: At the conclusion of this session, participants should be able to:

- State the current legal definition of infanticide.
 - Differentiate between maternal psychiatric illnesses, specifically which are and are not associated with violence towards infants.
 - Describe typical and atypical clinical presentations of postpartum psychosis (PPP) and discuss the limitations of current diagnostic terminology.
 - Develop a comprehensive plan to screen patients at risk for PPP and to treat patients experiencing acute PPP.
-

Zoom Only

November 15, 2023

Menopause: A Much-Neglected Neurological Transition State and Period of Psychiatric Vulnerability

Karen Horst, MD

Assistant Professor

Obstetrics & Gynecology

Baylor College of Medicine

Texas Children's Hospital, Pavilion for Women

Objectives: At the conclusion of this session, participants should be able to:

- Explain the essential research on menopause for stages and treatment.
- Examine estrogen activity in the central nervous system to understand the cognitive and psychiatric symptoms that arise during the menopausal transit.
- Identify ways the psychiatrist can help female patients through the menopausal transition.

Thanksgiving Holiday

November 22, 2023

No Grand Rounds

Hybrid: Zoom & In Person

November 29, 2023

**Clozapine is the Most Effective Antipsychotic Medication;
Why are we not Prescribing it?**

Olaoluwa Okusaga, MD

Associate Professor

Baylor College of Medicine

Michael E. DeBakey VA Medical Center

Objectives: At the conclusion of this session, participants should be able to:

- Describe the morbidity and mortality associated with treatment-resistant schizophrenia (TRS).
 - List the reasons why psychiatrists are reluctant to prescribe clozapine despite its proven effectiveness in patients with TRS.
 - Demonstrate awareness of how the risk of clozapine-induced neutropenia changes with time.
 - Apply knowledge gained from this grand round by initiating clozapine in at least one patient over the next 3 months.
-
