

Inflammatory Conditions of the Pouch: Epidemiology, Risk Stratification, (And Opportunities for Change?)

Edward L. Barnes, MD, MPH

Assistant Professor of Medicine

Division of Gastroenterology and Hepatology
University of North Carolina at Chapel Hill

About this seminar: This talk will review new methods to study the epidemiology of pouchitis and other pouch-related disorders. I will also discuss the existing knowledge regarding risk stratification for patients after ileal pouch-anal anastomosis and potential methods for improving risk stratification in the future. Finally, I will discuss the importance of standardized assessments of patients after ileal pouch-anal anastomosis and how this will aid future research into the prevention and treatment of inflammatory conditions of the pouch.
