

## "A New Paradigm for Treating Children with Functional Abdominal Pain Disorders"

**John M. Hollier, M.D., M.P.H.**  
Assistant Professor, Pediatrics  
Gastro, Hepatology, Nutrition  
Baylor College of Medicine

**About this seminar:** Functional abdominal pain disorders (FAPDs) are highly prevalent worldwide among school-aged children, adolescents, and adults. These disorders are associated with significant morbidity, including increased anxiety and depressive symptoms and decreased health-related quality of life. Medical literature suggests psychological therapies should be utilized to treat FAPDs, yet significant barriers prevent patient access. Learn about our journey as we aim to overcome these barriers and develop a patient-centered treatment approach using routinely accessible technology.
